

Education

Aug 2023 - July 2027

Kalinga University, Raipur - BTech CSE with AIML

CGPA: 9.3

Experience

Project Manager & Technical Lead | AI/ML Engineering | Prashant Kumar LTD | June 2026 – Present

- Led the architecture and development of an AI-powered Job Intelligence Engine using Python, NLP, LLMs, APIs, and MongoDB.
- Engineered a scalable ETL and job intelligence pipeline for multi-source scraping, preprocessing, classification, semantic JD analysis, and enriched data persistence.
- Developed a JD analysis engine for extracting required/preferred skills, experience, education, seniority, ATS keywords, and job responsibilities.
- Implemented API-based data ingestion, cursor pagination, deduplication, structured extraction, and MongoDB enrichment workflows for 1,000+ job records.
- Integrated LLM-assisted analysis with deterministic heuristic fallback mechanisms to improve pipeline reliability and reduce external API dependency.
- Led technical execution, code integration, testing, debugging, and cross-functional coordination while driving ATS matching and candidate intelligence development.

ML Research Intern | Suvidha Foundation | Jan 2026 – May 2026

- Evaluated and benchmarked 10 pre-trained transformer models on the NewsSum dataset using ROUGE-1, ROUGE-2, ROUGE-L, and BERTScore metrics.
- Performed comparative analysis to identify optimal architectures for abstractive text summarization.
- Designed and developed S²-HMD, a novel hybrid summarization model, and authored a research paper detailing its methodology, innovations, and evaluation results.
- Improved understanding of model performance trade-offs through systematic experimentation and metric-driven analysis

AIML Developer Intern | Nish-E-Services Pvt. Ltd. | Oct 2025 – Jan 2026

- Developed an AI chatbot using Python, NLP, and TextBlob for intent recognition and conversational interaction.
- Migrated the chatbot from an ML-based architecture to a Node.js tree-based conversational engine to align with changing business requirements.
- Built a centralized admin dashboard for chatbot flow management, monitoring, and operational control.
- Collaborated with stakeholders to translate business needs into scalable technical solutions.

Skills

Python, Java, JavaScript, TypeScript, C, SQL, Machine Learning, Deep Learning, NLP, Computer Vision, Scikit-Learn, YOLOv3, TextBlob, MERN Stack, Flask, Node.js, HTML, CSS, PHP, Git, Arduino, JSON, REST APIs, Power BI, Generative AI, RAG, Knowledge Graphs, Vector Databases, AI Agents, Data Structures & Algorithms

Projects

PersonaX – Human Digital Twin Platform

- Building an AI-powered digital twin capable of learning user behavior, memories, preferences, and decision patterns.
- Integrating LLMs, RAG, vector databases, knowledge graphs, and long-term memory systems to create personalized AI agents.
- Designed for contextual reasoning, adaptive responses, and personalized user assistance.

WasteWatchers – AI & IoT Smart Waste Monitoring System

- Developed an intelligent waste management solution that monitors bin fill levels and optimizes collection routes.
- Combined IoT sensors, data analytics, and AI-based monitoring to improve operational efficiency.

Automated Power Monitoring System

- Built a YOLOv3-based computer vision system for real-time occupancy detection and automated energy management.
- Reduced unnecessary power consumption through intelligent occupancy-driven control mechanisms.

AVI - AI Virtual Interviewer

- Built an NLP-based virtual assistant using machine learning for intent classification and contextual response generation.
- Integrated Computer Vision and NLP.

Achievements

- **2nd Place – Envirothon 2025**, organized by the Government of Chhattisgarh, recognized for developing and presenting an innovative technology-driven solution addressing environmental and sustainability challenges.
- **Winner – Ideathon 2026 at NIT Raipur**, awarded for proposing an innovative, problem-focused solution and demonstrating strong capabilities in ideation, technical planning, and solution development.
- **Winner – Intra-Institutional Startup Competition 2025**, recognized for presenting a scalable startup concept with strong innovation, problem-solving, and real-world application potential.
- **4th Place – KU Hackathon**, developed an Automated Power Monitoring System using Python, YOLOv3, OpenCV, Arduino, and PyQt to enable occupancy-based power monitoring and intelligent energy management.
